Challenge-4

Ng Chee Ting

2023-09-05

Questions

Load the “CommQuest2023.csv” dataset using the `read_csv()` command and assign it to a variable named “comm_data.”

```
# Enter code here
library(tidyverse)
```

```
## Warning: package 'tidyverse' was built under R version 4.2.3
```

```
## Warning: package 'ggplot2' was built under R version 4.2.3

```
## Warning: package 'forcats' was built under R version 4.2.3
```

```
## Warning: package 'lubridate' was built under R version 4.2.3
```

```
## ── Attaching core tidyverse packages ──────────────────────── tidyverse 2.0.0 ──
## ✓ dplyr     1.1.2     ✓ readr     2.1.4
## ✓ forcats   1.0.0     ✓ stringr   1.5.0
## ✓ ggplot2   3.4.3     ✓ tibble    3.2.1
## ✓ lubridate 1.9.2     ✓ tidyr     1.3.0
## ✓ purrr     1.0.1
## ── Conflicts ────────────────────────────────────────── tidyverse_conflicts() ──
## ✖ dplyr::filter() masks stats::filter()
## ✖ dplyr::lag()    masks stats::lag()
## ℹ Use the conflicted package (<http://conflicted.r-lib.org/>) to force all conflicts to be
come errors
```

```
comm_data<- read_csv("CommQuest2023_Larger.csv")
```

```
## Rows: 1000 Columns: 5
## ── Column specification ────────────────────────────────────────────────────────
## Delimiter: ","
## chr  (3): channel, sender, message
## dbl  (1): sentiment
## date (1): date
##
## ℹ Use `spec()` to retrieve the full column specification for this data.
## ℹ Specify the column types or set `show_col_types = FALSE` to quiet this message.
```

Question-1: Communication Chronicles

Using the select command, create a new dataframe containing only the “date,” “channel,” and “message” columns from the “comm_data” dataset.

Solution:`

```
# Enter code here
comm_data %>%
  select(date,channel,message)
```

```
## # A tibble: 1,000 × 3
##    date       channel message
##    <date>     <chr>   <chr>
##  1 2023-08-11 Twitter Fun weekend!
##  2 2023-08-11 Email   Hello everyone!
##  3 2023-08-11 Slack   Hello everyone!
##  4 2023-08-18 Email   Fun weekend!
##  5 2023-08-14 Slack   Need assistance
##  6 2023-08-04 Email   Need assistance
##  7 2023-08-10 Twitter Hello everyone!
##  8 2023-08-04 Slack   Hello everyone!
##  9 2023-08-20 Email   Team meeting
## 10 2023-08-09 Slack   Hello everyone!
## # ℹ 990 more rows
```

Question-2: Channel Selection

Use the filter command to create a new dataframe that includes messages sent through the “Twitter” channel on August 2nd.

Solution:

```
# Enter code here
comm_data %>%
  filter(channel == "Twitter",
         date == "2023-08-02")
```

```
## # A tibble: 15 × 5
##    date       channel sender        message         sentiment
##    <date>     <chr>   <chr>         <chr>               <dbl>
##  1 2023-08-02 Twitter alice@example Team meeting        0.210
##  2 2023-08-02 Twitter @erin_tweets  Exciting news!      0.750
##  3 2023-08-02 Twitter dave@example  Exciting news!      0.817
##  4 2023-08-02 Twitter @erin_tweets  Exciting news!      0.582
##  5 2023-08-02 Twitter @erin_tweets  Exciting news!     -0.525
##  6 2023-08-02 Twitter alice@example Team meeting        0.965
##  7 2023-08-02 Twitter dave@example  Great work!         0.516
##  8 2023-08-02 Twitter carol_slack   Hello everyone!     0.451
##  9 2023-08-02 Twitter carol_slack   Hello everyone!     0.174
## 10 2023-08-02 Twitter carol_slack   Need assistance     0.216
## 11 2023-08-02 Twitter @frank_chat   Need assistance    -0.115
## 12 2023-08-02 Twitter alice@example Need assistance     0.158
## 13 2023-08-02 Twitter carol_slack   Exciting news!     -0.693
## 14 2023-08-02 Twitter @bob_tweets   Need assistance    -0.282
## 15 2023-08-02 Twitter @erin_tweets  Need assistance     0.821
```

Question-3: Chronological Order

Utilizing the arrange command, arrange the “comm_data” dataframe in ascending order based on the “date” column.

Solution:

```
# Enter code here
comm_data %>%
  arrange(date)
```

```
## # A tibble: 1,000 × 5
##    date       channel sender        message         sentiment
##    <date>     <chr>   <chr>         <chr>               <dbl>
##  1 2023-08-01 Twitter alice@example Need assistance     0.677
##  2 2023-08-01 Twitter @bob_tweets   Need assistance     0.148
##  3 2023-08-01 Twitter @frank_chat   Need assistance     0.599
##  4 2023-08-01 Twitter @frank_chat   Exciting news!     -0.823
##  5 2023-08-01 Slack   @frank_chat   Team meeting       -0.202
##  6 2023-08-01 Slack   @bob_tweets   Exciting news!      0.146
##  7 2023-08-01 Slack   @erin_tweets  Great work!         0.244
##  8 2023-08-01 Twitter @frank_chat   Team meeting       -0.526
##  9 2023-08-01 Twitter @frank_chat   Exciting news!     -0.399
## 10 2023-08-01 Slack   @frank_chat   Need assistance     0.602
## # ℹ 990 more rows
```

Question-4: Distinct Discovery

Apply the distinct command to find the unique senders in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data %>% distinct(sender)
```

```
## # A tibble: 6 × 1
##   sender
##   <chr>
## 1 dave@example
## 2 @bob_tweets
## 3 @frank_chat
## 4 @erin_tweets
## 5 alice@example
## 6 carol_slack
```

Question-5: Sender Stats

Employ the count and group_by commands to generate a summary table that shows the count of messages sent by each sender in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data %>% group_by(sender) %>% summarise(count = n())
```

```
## # A tibble: 6 × 2
##   sender        count
##   <chr>         <int>
## 1 @bob_tweets     179
## 2 @erin_tweets    171
## 3 @frank_chat     174
## 4 alice@example   180
## 5 carol_slack     141
## 6 dave@example    155
```

Question-6: Channel Chatter Insights

Using the group_by and count commands, create a summary table that displays the count of messages sent through each communication channel in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data %>%
  group_by(channel) %>%
  summarise(count= n())
```

```
## # A tibble: 3 × 2
##   channel count
##   <chr>   <int>
## 1 Email     331
## 2 Slack     320
## 3 Twitter   349
```

Question-7: Positive Pioneers

Utilize the filter, select, and arrange commands to identify the top three senders with the highest average positive sentiment scores. Display their usernames and corresponding sentiment averages.

Solution:

```
# Enter code here
comm_data %>%
  group_by(sender)%>%
  summarise(avg_sentiment = mean(sentiment)) %>%
  filter(avg_sentiment>0)%>%
  arrange(desc(avg_sentiment)) %>%
  slice(1:3)
```

```
## # A tibble: 3 × 2
##   sender        avg_sentiment
##   <chr>                 <dbl>
## 1 carol_slack         0.118
## 2 alice@example       0.0570
## 3 dave@example        0.00687
```

Question-8: Message Mood Over Time

With the group_by, summarise, and arrange commands, calculate the average sentiment score for each day in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data %>%
  group_by(date) %>%
  summarise(avg_sentiment = mean(sentiment))%>%
  arrange(date)
```

```
## # A tibble: 20 × 2
##    date       avg_sentiment
##    <date>             <dbl>
##  1 2023-08-01       -0.0616
##  2 2023-08-02        0.136
##  3 2023-08-03        0.107
##  4 2023-08-04       -0.0510
##  5 2023-08-05        0.193
##  6 2023-08-06       -0.0144
##  7 2023-08-07        0.0364
##  8 2023-08-08        0.0666
##  9 2023-08-09        0.0997
## 10 2023-08-10       -0.0254
## 11 2023-08-11       -0.0340
## 12 2023-08-12        0.0668
## 13 2023-08-13       -0.0604
## 14 2023-08-14       -0.0692
## 15 2023-08-15        0.0617
## 16 2023-08-16       -0.0220
## 17 2023-08-17       -0.0191
## 18 2023-08-18       -0.0760
## 19 2023-08-19        0.0551
## 20 2023-08-20        0.0608
```

Question-9: Selective Sentiments

Use the filter and select commands to extract messages with a negative sentiment score (less than 0) and create a new dataframe.

Solution:

```
# Enter code here
comm_data %>%
  filter(sentiment<0) %>%
  select(message, sentiment)
```

```
## # A tibble: 487 × 2
##    message         sentiment
##    <chr>               <dbl>
##  1 Hello everyone!    -0.143
##  2 Need assistance    -0.108
##  3 Hello everyone!    -0.741
##  4 Hello everyone!    -0.188
##  5 Hello everyone!    -0.933
##  6 Need assistance    -0.879
##  7 Great work!        -0.752
##  8 Team meeting       -0.787
##  9 Fun weekend!       -0.539
## 10 Exciting news!     -0.142
## # ℹ 477 more rows
```

Question-10: Enhancing Engagement

Apply the mutate command to add a new column to the “comm_data” dataframe, representing a sentiment label: “Positive,” “Neutral,” or “Negative,” based on the sentiment score.

Solution:

```
# Enter code here
comm_data %>%
  mutate(label = case_when(sentiment < as.logical(0) ~ 'Negative',
                           sentiment > as.logical(0) ~ 'Positive',
                           sentiment = as.logical(0) ~ 'Neutral'))
```

```
## # A tibble: 1,000 × 6
##    date       channel sender        message         sentiment label
##    <date>     <chr>   <chr>         <chr>               <dbl> <chr>
##  1 2023-08-11 Twitter dave@example  Fun weekend!        0.824 Positive
##  2 2023-08-11 Email   @bob_tweets   Hello everyone!     0.662 Positive
##  3 2023-08-11 Slack   @frank_chat   Hello everyone!    -0.143 Negative
##  4 2023-08-18 Email   @frank_chat   Fun weekend!        0.380 Positive
##  5 2023-08-14 Slack   @frank_chat   Need assistance     0.188 Positive
##  6 2023-08-04 Email   @erin_tweets  Need assistance    -0.108 Negative
##  7 2023-08-10 Twitter @frank_chat   Hello everyone!    -0.741 Negative
##  8 2023-08-04 Slack   alice@example Hello everyone!    -0.188 Negative
##  9 2023-08-20 Email   dave@example  Team meeting        0.618 Positive
## 10 2023-08-09 Slack   @erin_tweets  Hello everyone!    -0.933 Negative
## # ℹ 990 more rows
```

Question-11: Message Impact

Create a new dataframe using the mutate and arrange commands that calculates the product of the sentiment score and the length of each message. Arrange the results in descending order.

Solution:

```
# Enter code here
comm_data %>%
  mutate(product = sentiment*nchar(message)) %>%
  arrange(desc(product))
```

```
## # A tibble: 1,000 × 6
##    date       channel sender       message         sentiment product
##    <date>     <chr>   <chr>        <chr>               <dbl>   <dbl>
##  1 2023-08-16 Email   @frank_chat  Hello everyone!     0.998    15.0
##  2 2023-08-14 Slack   @erin_tweets Hello everyone!     0.988    14.8
##  3 2023-08-18 Email   dave@example Hello everyone!     0.978    14.7
##  4 2023-08-17 Email   dave@example Hello everyone!     0.977    14.7
##  5 2023-08-07 Slack   carol_slack  Hello everyone!     0.973    14.6
##  6 2023-08-06 Slack   dave@example Hello everyone!     0.968    14.5
##  7 2023-08-08 Slack   @frank_chat  Need assistance     0.964    14.5
##  8 2023-08-09 Email   @erin_tweets Need assistance     0.953    14.3
##  9 2023-08-17 Twitter @frank_chat  Hello everyone!     0.952    14.3
## 10 2023-08-12 Email   carol_slack  Need assistance     0.938    14.1
## # ℹ 990 more rows
```

Question-12: Daily Message Challenge

Use the group_by, summarise, and arrange commands to find the day with the highest total number of characters sent across all messages in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data %>%
  group_by(date) %>%
  summarise(total_chr = sum(nchar(message))) %>%
   arrange(desc(total_chr))
```

```
## # A tibble: 20 × 2
##    date       total_chr
##    <date>         <int>
##  1 2023-08-10       875
##  2 2023-08-14       850
##  3 2023-08-07       790
##  4 2023-08-12       764
##  5 2023-08-18       743
##  6 2023-08-15       694
##  7 2023-08-13       680
##  8 2023-08-08       679
##  9 2023-08-20       669
## 10 2023-08-16       659
## 11 2023-08-06       643
## 12 2023-08-11       635
## 13 2023-08-01       597
## 14 2023-08-03       593
## 15 2023-08-19       593
## 16 2023-08-04       587
## 17 2023-08-05       584
## 18 2023-08-09       568
## 19 2023-08-17       561
## 20 2023-08-02       422
```

Question-13: Untidy data

Can you list at least two reasons why the dataset illustrated in slide 10 is non-tidy? How can it be made Tidy?

Solution: Variables that appears multiple times in a column such as “In labour force” Multiple variables in column such as “Own children of the household 6 to 17 years”

- I will separate the years into another variable of its own
- Categorise 3 main rows: Population, Females, Own children of the householder
